

Moving Stories

CENTRAL AMERICA

NICARAGUA

Angela's coffee farm used to provide a good living for her family. But now she's facing a crisis. The changing climate in Nicaragua means her coffee harvests are shrinking every year.

Too much rain and the coffee beans don't ripen properly. Too much sun and the coffee beans can suffer from diseases like chasparria, causing half the bean to ripen too soon. Coffee farmers used to lose only 5% of their crop. Now it is 30%.

Angela explained: 'With climate change, the coffee suffers from many diseases and pests. The sun has scorched the coffee beans; we cannot sell them and we're losing more every year because of climate change.'

Your ongoing support for Angela through Commitment for Life makes all the difference. Please continue to pray and work for justice as you have been doing for so many years.

CHILDREN & YOUTH!

Download this brilliant book with SIX sessions all about Nicaragua: with games, recipes, and facts
